#### 1- Create Visual Studio Project

#### 2- Add code for Nuget

```
RandomGenerator.cs 💠
                                       ▼ RandomGenerator
                                                                                   ▼ 😭 RandomInteger()
                                                                                                                                   🚜 🖰 - 🗇 🖆 🔧 - 🔑
                                                                                                                                    earch Solution Explorer (Ctrl+;)
             public static class RandomGenerator
                                                                                                                                    Solution 'NugetPackageDemo' (1 of 1 project)

    NugetPackageDemo

                  private static Random random = new Random();
       3
                                                                                                                                      ▶ ₽₽ Dependencies
                                                                                                                                      ▶ C# RandomGenerator.cs
                  public static string RandomString(int length)
       5
                      const string chars = "ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789";
       6
                      return new string(Enumerable.Repeat(chars, length)
       7
       8
                          .Select(string s => s[random.Next(s.Length)]).ToArray());
       9
      10
                 public static int RandomInteger(int min, int max)
      11
      12
                      return random.Next(min, max);
      13
      14
      15
                  public static int RandomInteger()
      17
      18
                      return random.Next();
      190
      20
```

3 - Set Package Configuration

# General Generate NuGet package on build Produce a package file during build operations. Package ID ① The case-insensitive package identifier, which must be unique across nuget.org or whatever gallery the package resides in. IDs may not contain spaces or characters that are not valid for a URL, and generally follow.NET namespace rules. \$(AssemblyName) NugetPackageDemo Title A human-friendly title of the package, typically used in UI displays as on nuget.org and the Package Manager in Visual Studio.

#### 4 - Build and Create Nupkg File
